smartShift®

Carve out all of the customization with no risk and no guesswork.

Accelerate divestitures and reorganizations by automatically extracting everything that needs to work, including all hidden dependencies.

Separate What Matters. Protect What Remains.

Every carve-out is high-stakes. When business units split or change ownership, SAP systems often become the hardest part to separate. Custom code interdependencies, hidden enhancements, and unclear ownership create massive risk. smartShift's Code Carve-Out solution uses patented automation to isolate only what's needed—ensuring clean separation, full stability, and business continuity.

Separate with Speed. Keep Systems Stable.

The Challenge: SAP Carve-Outs Are Complex.

Separating SAP systems during divestitures or restructuring isn't as simple as copying data or programs. When you need to carve out custom development, you must identify all object dependencies to ensure that what you extract will work properly where it needs to be deployed. You also need a framework for packaging everything correctly.

Organizations often face:
- Deep interdependencies between modules, exits, enhancements, data objects
- Limited visibility into what code is truly required for the new entity
- High risk of destabilizing both environments during separation
- Trial-and-error discovery and validation cycles that delay timelines
- Strict timelines dictated by legal agreements

Manual approaches can take months, often missing critical dependencies or duplicating unneeded logic. The result is system instability, rework, and business disruption at precisely the wrong time.

The Solution: Precision Code Separation.

smartShift automates the end-to-end separation of relevant custom development (code and data objects) with intelligence and accuracy. Using our Code Carveout solution, we automate:

- Identification of the exact custom objects tied to the carve-out
- Analyzing dependencies across data objects, user exits, and enhancements
- Isolating, extracting, renaming, and repackaging the required objects for the new landscape
- Preserving performance, stability, and integrity in both source and target systems

This automation-driven approach delivers clean, traceable carve-outs that cut time and risk from critical business transitions.

Accelerate Divestiture with Confidence

In fast-moving divestiture or restructuring programs, SAP teams face immense pressure to deliver technical separation within legal, business, or technical deadlines.

smartShift's Code Carve-Out solution lets you:

- Execute SAP code separation in weeks instead of months
- Eliminate manual discovery and dependency risk
- Ensure stability across both parent and divested entities
- Free internal resources to focus on business needs, not remediation

The result: meeting tight deadlines with minimal business impact, and creating a modern SAP landscape ready for what's next.

Separate with Speed. Keep Systems Stable.

Keep your SAP systems stable, compatible, and future-ready through every carve-out or divestiture—without disruption.

What You Get with smartShift Code Carve-Out.

A clean, secure separation of your SAP custom development—ensuring business continuity and transparency throughout complex divestitures or reorganizations.

✓ Clean Separation Without Disruption
Extract only what's needed while maintaining full system integrity.

✓ Accelerated Divestiture Timelines
Speed up legal and operational separation with automated execution.

✓ Transparent, Controlled Results
Every dependency validated and documented for full traceability.

✓ No Impact to Business Continuity
Keep operations stable and productive during transition.

Why smartShift?

smartShift has delivered fast, clean SAP code separations for some of the world's most complex enterprises—with zero disruption. Our automation, experience, and guarantees eliminate risk from critical carve-out programs.

Enterprise-Grade Accuracy and Speed
Transform and separate millions of lines of SAP code in weeks with 99.99% automation accuracy—powered by patented Intelligent Automation®.

Predictable, Risk-Free Delivery
Fixed price and timeline guarantees provide confidence for time-sensitive M&A and restructuring events.

Fast, Reliable Outcomes
Proven in high-complexity carve-out scenarios, ensuring both systems remain stable, secure, and transformation-ready.

Trusted by Global Enterprises
Leading SAP customers worldwide rely on smartShift to manage separation, modernization, and transformation at scale.
