

Don't Just Upgrade – Stay Current, Get Clean, and Transform.

Clear your end-of-maintenance risk. Modernize for what's next.

Facing an S/4HANA upgrade?

You have two options:

A: Clear the end-of-maintenance deadline.

B: Modernize your system for the future

Some teams stop at A—spending time and budget to do the bare minimum. But that leaves behind technical debt, misses critical issues, and sets up another painful upgrade.

smartShift helps you do both—without extra effort.

In the same window you're already planning to spend, we get you current and deliver clean, secure, upgrade-ready code.

Same project. Better outcome. Higher ROI.

The Challenge: Every Upgrade Without Custom Code Transformation Makes the Next One Harder

Upgrading to a new version of SAP S/4HANA isn't simple—each release introduces **modern coding standards, security, compliance, and extensibility rules that can silently break custom code**. Some teams choose option A—fixing only what's broken to meet the deadline—but still spend significant time and budget while carrying forward technical debt, missed issues, and unstable code.

Here's the cost of that approach:

- Custom logic breaks due to incompatible extensibility models
- Manual remediation adds risk and delays
- Obsolete and unused code piles up, increasing technical debt
- Test cycles stretch and business disruption grows
- Security risks are not addressed
- You can't begin your journey to a Clean Core

smartShift customers take a smarter path. They use the same upgrade window to do both—options A and B: stay current and modernize their custom code. The result is cleaner systems, stronger performance, and faster future upgrades—with higher ROI in the same timeframe.

The Solution: Upgrade with Speed, Modernized Code, and the foundation of a Clean Core

smartShift's automated solution **modernizes your entire custom codebase with Clean Core standards applied by default.**

This isn't just a version change. It's a transformation.

- Remediation of all code issues—not just P1/P2
- Elimination of obsolete code and technical debt
- Improved system stability, performance, and security
- Clean Core compliance built in—positioned for BTP and future upgrades
- Fixed price, fixed timeline, guaranteed delivery
- Minimal business disruption

With smartShift, you don't just get to the next release—you unlock a future of faster, simpler SAP upgrades.

Upgrade Before the Deadline Hits

If you're facing an upcoming S/4HANA version upgrade, the clock is ticking – and the risks are real. Whether you're under pressure to meet end-of-maintenance deadlines or dealing with unstable custom code, smartShift helps you take control with automation, precision, and speed.

Who Needs This?

Companies running:

- SAP S/4HANA 1709, 1809, or 1909 (end of extended maintenance: 12/31/2025)
- SAP S/4HANA 2020 (end of regular maintenance: 12/31/2025)
- Organizations struggling with manual upgrade cycles, simplification items, or legacy technical debt

Don't take our word for it

See how global enterprises like Kimberly-Clark, P&G, and BMW used smartShift to accelerate their SAP transformations.

What you get with smartShift.

smartShift shrinks upgrade timelines, eliminates risks, and frees your team to focus on innovation – not manual code cleanup. Our automation accelerates every step of the process, ensures full compatibility, and delivers optimized, secure custom code with minimal disruption.

Accelerate seamless SAP S/4HANA version upgrades

Avoid delays, eliminate rework, and minimize disruption to your business.

Automated code remediation

Remove manual effort, reduce errors, and ensure high-quality results at scale.

Improve performance, stability, and security – proactively

Strengthen your SAP environment and reduce risk from day one.

Reduce freeze windows and allows for continual innovation

Keep your business moving with dual maintenance that maintains custom code in both systems until your go live.

Lay the foundation for Clean Core compliance and SAP BTP adoption

Position your landscape for agility, modernization, and future SAP innovation.

Why smartShift?

smartShift delivers unmatched speed, accuracy, and assurance for your SAP S/4HANA journey. Our automation-first approach eliminates risk, accelerates timelines, and guarantees results—backed by deep SAP expertise and proven at enterprise scale.

Enterprise-Grade Accuracy and Speed

Transform millions of lines of code in weeks with 99.99% automation accuracy—powered by patented Intelligent Automation®.

Predictable, Risk-Free Delivery

Fixed price and timeline guarantees eliminate budget surprises and project delays.

Built for Clean Core and BTP

Align with SAP's modern standards and unlock future innovation.

Trusted by Global Enterprises

Leading SAP customers around the world rely on smartShift to future-proof their custom code and accelerate transformation.
